

Product Code . JL-DEL-10428

Programmable DC Electronic Load

Description

Programmable DC Electronic Load

Description:-

With a user-friendly interface including graphical charting, the JLab3000 series provides various interfaces for remote communication to meet your diversified test requirements.

The JLab3000 is a cost-effective programmable DC Electronic Load with performance specifications that rival any instrument in its class.

Test power systems and batteries with configurable static, transient, and advanced application modes.

Features:-

High resolution and accuracy on voltage and current load conditions

Dynamic Load Performance and Visualization

Free UltraLoad Software for remote operation and monitoring

Up to 5 A/us slew rate and 30 KHz dynamic loading

3 Built in application setups for battery testing or Current or Power optimization
