

Product Code . JL-M-10469

Microwave Power Meter

Description

Microwave Power Meter

Description:-

This provides the high accuracy over a wide temperature range by measuring the output voltage of the thermistor bridge and computing the corresponding power.

Microwave Power Meter is an automatic self-balancing power meter.

The cable for connecting the sensor with the microwave power meter is also provided.

It measures the RF power with the help of temperature compensated Thermistor Mount from 1W to 10mW accurately.

Features:-

Automatic self balancing Power meter

Provided with 1mW calibration source

Microcontroller based instrument

PC Interface facility

Measurement of power in micro/milli Watt and in

dBm simultaneously

Compact size

LCD

No Thermoelectric error for high accuracy over a wide dynamic range

Available with sensor connecting cable
