

**Product Code . JL-SADS-10477**

## Digital Rework Station

### Description

---

Digital Rework Station

Features:-

Temperature control accuracy  $\pm 10^{\circ}\text{C}$

Last set value of temperature is stored in memory

Digital calibration will be done through micro controller to avoid analog components tolerances

Accurate and advanced temperature Control with micro controller technology

User-friendly operation

Safety feature the system is provided with safety feature when the unit is switched "OFF" the pump will release maximum air 24L/min

Irrespective of the linear position of the air volume control

The pump will be on till the element temperature reaches safe temperature of  $1000^{\circ}\text{C}$

Set / Read of temperature

Increase and Decrease of keys to set temperature once set the read temperature will display after two seconds by default

Which will be flashed on the led display.

---

Password protection feature to stop tampering with set temperature by the operators for (Bulk Customers)

Burn proof silicon cable with thermal resistance up to 6000C

To prevent static electric discharge to the printed circuit board

---
