

Product Code . JL-BE-10505

## Astable and Monostable Multivibrator Trainer

### Description

---

Astable and Monostable Multivibrator Trainer

Description:-

The Astable Multivibrator, often called as the Free-Running Multivibrator, is frequently used as a simple mean of generating square and rectangular wave signal.

Experimentation with Astable and Monostable Multivibrator has been designed specifically for the study of Multivibrator in Astable and Monostable Modes.

The board is absolute with an in-built supply and pulse generator.

It has a nonstable state. The Monostable Multivibrator, often called as One-Shot Multivibrator and is useful for generating a single pulse of desired duration in response to an external trigger.

**Astable and Monostable Multivibrator Trainer Manufacturer, Astable and Monostable Multivibrator Trainer Suppliers, Astable and Monostable Multivibrator Trainer India, Astable and Monostable Multivibrator Trainer Exporter, buy Astable and Monostable Multivibrator Trainer, Basic Electronics, Astable and Monostable Multivibrator Trainer India, Electronics, Astable and Monostable Multivibrator Trainer, Astable and Monostable Multivibrator Trainer Manufacturer, Educational Lab Equipment, buy Astable and Monostable Multivibrator Trainer Online India.**

Features:-

Good quality, reliable sockets and test points are provided

---

Strongly supported by systematic operating instructions

In-built +5V regulated DC Power Supply

In-built 1KHz pulse generator for triggering the monostable circuit

A low cost training solution

Scope of Learning:-

To study the IC 555 as an Astable (Free-Running) Multivibrator

To study the IC 555 as a Monostable (One-Shot) Multivibrator
