Doppler Effect Apparatus

Description

Doppler Effect Apparatus

- A simple yet educational tool.
- The Doppler Apparatus is a fantastic tool to demonstrate the concept of the Doppler Effect and stimulate student curiosity.
- Simply tie the rope around the apparatus, turn it on and swing it around in circles.
- The change in pitch as the apparatus rotates in circles is easily recognizable.
- The manual comes with a theoretical section on the Doppler Effect, instructions about how to perform the demonstration and a STEM section explaining practical real-world applications of the Doppler Effect.
- 48 inches of rope is supplied with each apparatus.
- Unit requires 4 AAA Cell batteries, not included.

Total Length:

- 6.69 Inches (170mm)
