## Prismatic Compass

### Description

---

#### Prismatic Compass

This precision engineered Prismatic Compass is one of the important devices which imparts immensely accurate readings for navigational purposes.

It is well-equipped with brass or aluminum metal circular box, having a diameter of 100/125 mm.

A extremely magnetized needle on a hard steel pointed pivot is balanced at the centre of the box.

An Aluminum circle consists of a needle, which is graduated to 30 min. (0. 50) with engraved inverted figures.

The graduations are magnified by sliding the prism integrated with colored glasses having a sighting slit at the top.

The Prismatic Compass can be customized in conformance with the customers needs.
