Bioviewer Slides

Description

Bioviewer Slides

Bioviewer Slidoscope Includes Scope, 40 Set of Slides Teacher's and Home Schooling Choice Students tired of staring at science book pictures about biological processes or images of microscopic samples of organs.

Teachers tired of the hassle of setup, focusing, and cleaning of microscope slides.

Just looking for a more economic but yet accurate way of teaching or learning about biology on a microscopic level.

The Bioviewer slidoscope is a simple viewer made of tough, unbreakable, molded plastic body with white reflector and single focusing knob.

Provides quick and convenient viewing of slides or film strips in the classroom under normal daylight.

Requires no external power source.

While the Bioviewer is simple and nearly unbreakable this premium set comes with the invaluable learning tool of a set of 40 high quality 2x2 transparency slides that are micro photographic.

The slides include photos of samples such as Amoeba, nerve cell, sperm, red blood cells, and phases such as the prophase of cellular division.

The slides are extremely clear and require little focus and also depict the ideal condition for each sample magnified right before your eyes.
