Safety Devices Training Panel

Description

Safety Devices Training Panel

An electrically heated pressure vessel is mounted on the panel.

The vessel can be filled via different pipe sections.

One pipe section is equipped with a system of safety devices for protecting a sealed water heater.

The pressure vessel is also equipped with a thermal discharge safety device that discharges to a blow-off pipe.

When the pressure or temperature level set is exceeded, the safety devices are tripped.

Pressure and temperature in the system are displayed.

A supply of water is required for operation.

The training panel can be fitted to the Universal Stand.

Features:

Trainer on heating systems and plumbing

Function of safety devices

Tested pressure vessel
