Tel tron Helmholtz Pair of Coils S

Description

Tel tron Helmholtz Pair of Coils S

Pair of Helmholtz coils for generating a uniform magnetic field perpendicular to the axis of the Teltron S series tube.

Tel tron Tube Holder S allows the coils to be configured in the Helmholtz geometry or at variable distances to produce magnetic fields aligned vertically, or coaxial, with respect to the tube axis.

The maximum field strength generated by the coils (~ 10 mT) is approximately 300 times weaker than that produced by an MRI machine (~ 3 T), known to be safe for use by people with medical implants such as pacemakers.
