Electromagnet Kit

Description

Electromagnet Kit

Measure the polarity and magnitude of electromagnetic forces.

A comprehensive kit containing the essential items for basic experiments in electromagnetism.

The kit includes two coils on plastic spools, a U-shape iron core, two magnetic needles with stands and a pair of easy-connect wires.

General investigation of Magnets, Eddy Current, Force Between Currents and Investigation of the Magnetic Field, are just some of the basic experiments that can be carried out with this kit.
