

Product Code . JL-PI-791

Color Wheel Adjustable JLab

Description

Color Wheel Adjustable

- There's a stimulating upstart product that will give your students something to think about.
 - It's a simple, but new variation of the color wheel.
 - You can adjust the color segments to reflect as much or as little of each color as you may think is required to achieve the highest level of light reflection.
 - The thinking comes in when it's necessary to decide just how much of each color is the correct amount to achieve a near white light reflection when the disc is spinning.
 - For use only with a hand-driven or a variable speed rotator that can be set to run at low speed (several hundred rpm), such as part.
 - **Dimensions:**
 - 23cm
-
