Human Skull with Brain

Description

Human Skull with Brain

Description:-

This human skull model is life-sized and has accurate representations of all sutures, fissures, joints, foramina, and processes.

The jaw is spring mounted to show the natural movement of the mandible and is detachable for closer investigation.

Model is made exclusively of medical quality PVC.

Skullcap can be removed to reveal the brain.

All structures are shown in detail and can be identified with included corresponding key.

The brain can be removed from the skull and divides into eight parts.
