Half Head with Musculature

Description

Half Head with Musculature

Description:-

This model is sectioned along the sagittal plane to show the blood vessels and nerve branches of the face and scalp.

A high-quality life-size model shows the outer, superficial and internal structures of the head and neck.

Head model is made exclusively of high-quality medical PVC.

Important structures such as the parotid and submandibular glands, pharynx, upper respiratory tract, and cervical vertebrae are also shown.
