Skin Model

Description

Skin Model

Description:-

This model shows the structure of human skin in three dimensions, 70X enlarged.

The different layers and features are numbered and labeled on a corresponding key card included with the model.

Individual layers of skin are clearly differentiated and anatomical structures such as hair follicles, sweat glands, receptors, blood vessels, nerves, elector muscles, and sebaceous glands are shown in detail.

Both board and model are made exclusively of high-quality medical PVC.

Mounted on 10.5" x 7.5" board.
