

Product Code . JL-SOMLE-8909

Tensile Testing Machine

Description

Tensile Testing Machine

Tensile Testing Machine are extra elegant, best quality, durable and accurate with matchless perfection.

This Machine are quite capable of conducting Compression and Bending tests apart from performing Tensile and Elongation tests.

This Machine are manufactured in different capacities upto 10,000Kgf. in our JLab ensuring + 1% accuracy in the test results.

Tensile Testing Machine are electrically operated machines for testing tensile strength and elongation of materials like plywood, wires, cables, conductors, ferrous and nonferrous materials

This Machine are manufactured in various capacities and tests can be conducted on these machines by simply incorporating appropriate traverse speeds and using suitable grips in conformity with the adopted BIS, BS, ASTM, DIN & ISO standards.
