

Product Code . JL-SOMLE-8919

Belt Grinder

Description

Belt Grinder

This backup has an important effect on the material removal rate and on the finish.

The backup governs choice of contact pressure, the angle of cut and the speed of operation.

Abrasive belt grinding machines are usually classified by the surface that forms the backup of the coated abrasive at the work area.

Belt Grinding Machines may be broadly classified according to the backups used as:-

Platen Grinding Machines:-

Contact Wheel Grinding Machines
