

Product Code . JL-SOMLE-8925

Auto Collimator

Description

Auto Collimator

Auto collimator is a versatile non-contact optical instrument for measurement of small angles or tilt movements with very high sensitivity.

The instrument finds multitude of applications in shop floor as well as metrology labs for precision measurements of straightness, parallelism, perpendicularity and flatness.

Features:-

High accuracy Angle measurements

Non-contact measurement

Repeatable Measurements

LED illumination
