Impact Testing Machine Charpy

Description

Impact Testing Machine Charpy

This makes the test useful in quality control applications.

Further, these have notch that is machined across one of larger faces.

As a fast & economical test, it is used more as comparative test rather than definitive test where the Charpy test specimens normally measure 55 x 10 x 10 mm.

Charpy Testing machine perform test on metals as well as on polymers, ceramics as well as composites and is commonly used for evaluating relative toughness/impact toughness of materials.
