Cam and Follower Apparatus

Description

Cam and Follower Apparatus

The cams are rotated by hand.

Each cam is mounted on a central shaft and is free to rotate about this shaft.

A vertical pillar contains the main spindle for each cam to be rotated, whilst a dial gauge has its anvil resting on the top edge of the cam.

Specification:-

Set of 5 cams: Simple Harmonic Motion Cam, Uniform Motion Cam, Constant Acceleration Cam, Tangent Cam, Eccentric Cam

Set of 2 followers: roller and knife-edge

Angular protractor scale with 360° range and 1° resolution

Dial gauge:-

25 mm range, 0.01 mm resolution, 60 mm diameter reading face.
