

**Product Code . JL-TWL-9198**

## Low Current Sensor

### Description

---

Low Current Sensor

#### **Description:-**

This is a small but very effective Linear current sensor module.

This module is good for max 5A current measurement.

JLab takes AC or DC voltage at its input and its output varies linearly with sensed current.

This module is designed hall effect based current sensor chip.

Its output is analog voltage.

Low Current Sensor outputs an analog voltage that varies linearly with sensed current.
