

Product Code . JL-AELE-9369

Automotive Electronic Circuit

Description

Automotive Electronic Circuit

This trainer should be designed to teach students principles and introductory to Automotive Electronic Circuits through comprehensive practical activities using on-board component's matrix with modular electronic components.

The activities include simple DC circuits and measurements, lamp in series circuits, lamp in parallel circuits, lamp in series-parallel circuits, switches, battery and fuse, resistance circuit, diodes and transistor familiarization.

The unit contains a circuit board with connection matrix, power supply, electrical test leads, and student experiment manual presented in hard copy and pdf format.
