Wet/Dry Test Tube Rack

Description

Wet/Dry Test Tube Rack

The rack will not rust or stain, and has been designed so that the flow over the length is uninterrupted except by the test tubes containing samples.

A high specific-gravity plastic provides excellent stability with no tendency to float or move in circulating water baths.

An alphanumeric grid reference on the top tier enables precise location in the rack of particular samples.

Shipped flat, easily and permanently snapped together to reduce shelf space needed in storerooms.
