Fraction Measurement Set

Description

Fraction Measurement Set

This uniquely designed nesting set shows capacity measurement units as part of a whole.

The gallon piece comes apart to visually demonstrate the fractional values of each smaller unit.

Students can see how the parts fit together to make a gallon, along with the gallon itself, at the same time.

The gallon fits 2 half-gallon pieces inside of it, which in turn fits 2 quarts per half-gallon and so on.

Each piece can also be used to hold liquid.

This 31-piece set includes 1 gallon, 2 half-gallons, 4 quarts, 8 pints, and 16 cups.

Gallon piece measures 13 in. x 12 in.

Activity guide also included.
