Biomedical Technology Kit

Description

Biomedical Technology Kit

The Biomedical Technology Kit contains everything you need for a classroom-based resource to investigate germs, the spread of disease and the purpose of vaccination.

The kit includes germ simulation lotion that can be used to investigate the importance of hand washing and sanitation.

The kit also contains a set of “contamination” bean bags that can be used to show how easily cross contamination can occur and allows students to explore preventative measures.

The included curriculum resources allow students to study the principles of sanitation, spread of disease and vaccination.

Typical Topics Include:-

Sanitation

Hygienic hand washing

Spread of disease

Vaccination

Genetic engineering
